 Neale’s Disorders of the Foot remains the essential resource for students and practitioners of podiatry. All the common conditions encountered in day-to-day podiatric practice are reviewed and their diagnoses and management described along with areas of related therapeutics. Students will find in this one volume everything they need to know about foot disorders and their treatment in order to pass their examinations, while practitioners will continue to appreciate the book’s accessibility and relevance to their daily practice. The new eighth edition is more indispensable than ever before with all contributions revised and brought up to date, colour photographs throughout, an all-new clear and accessible full colour design, and its own website including a full image library, video clips of key techniques and interactive self-assessment questions. Whether you need quick reference or more detailed information, the new and improved Neale’s Disorders of the Foot is ready to serve the needs of a new generation of podiatry students and practitioners.

The Science of Footwear

Handbook of Footwear Design and Manufacture, Second Edition, is a fully updated, expanded guide on the theories, processes, methodologies and technologies surrounding the footwear supply chain. Topics discussed include engineering design methodology, reducing manufacturing waste, footwear advertisement, emerging imaging technology, advice on the optimization of manufacturing processes for productivity, and summaries of the latest advances from researchers around the globe. This updated edition also includes coverage of sizing and grading based on different footwear styles and methods, AI based personalization and customization, emerging models for online footwear shopping (involving data mining), and new methods for foot data analysis.
and representation. Covers many exciting new developments, such as AR/VR, additive manufacturing, customization of footwear, new last design methods, and green footwear Addresses the entire footwear design and manufacture supply chain Explains new methods for foot data analysis and representation

Deep in the fir woods of southwestern China, in a village called Dimen, live several women who are masters of
many cultural arts. Following the centuries-old lifestyle of their ancestors, they are the living repositories of their civilization. They carry the unwritten history and wisdom of the Kam people in their songs, weave cloth that is smooth and strong, and dye fabric to the richest indigo blue. They devote every free moment to embroidering sleeves, hems, hats, and purses in the bright colors of the natural setting that surrounds the village. Through everyday activities, lessons in craft, folk stories and songs, the women weave a patchwork of Kam culture and reveal its hidden treasures in fibers, textiles, papermaking as well as ethnography, anthropology, and Sinology. This book presents an opportunity to learn from the past long lost in Western tradition, explore contemporary rural life in China, and experience ancient culture metamorphosing under the pressure of technology.

Although we now have sophisticated algorithms and techniques for determining the shapes and sizes and for
matching the fit between shoes and feet, few, if any, of the books currently available cover these new technologies until now. Bringing together high-quality and state-of-the-art contributions from designers, biomechanists, ergonomists, engineers, podiatrists, and scientists from industry and academia, The Science of Footwear provides an in-depth understanding of the technology and techniques involved in the design and development of a popular and demanding consumer product. This book introduces the design, development, manufacturing, and marketing of footwear. The chapters contain data from past research and the state-of-the-art methodologies. They not only cover every aspect of the product design, but also how the footwear industry caters to the wide-ranging needs of sophisticated and demanding customers. The footwear industry has rapidly changed over the last 10 years. Mass production has changed to personalization and mass customization, areas that are not well-understood. This book explores these different concepts in a coherent way, drawing on differing views that give a holistic view of the science behind footwear. Collating information from different disciplines, the book provides the tools to develop the next generation of footwear.

The Concise Encyclopedia of Biomedical Polymers and Polymeric Biomaterials presents new and selected content from the 11-volume Biomedical Polymers and Polymeric Biomaterials Encyclopedia. The carefully culled content includes groundbreaking work from the earlier published work as well as exclusive online material added since its publication in print. A diverse and global team of renowned scientists provide cutting edge information concerning polymers and polymeric biomaterials. Acknowledging the evolving nature of the field, the encyclopedia also features newly added content in areas such as tissue engineering, tissue repair and reconstruction, and biomimetic materials.

This book gathers recent research works in emerging Artificial Intelligence (AI) methods for the convergence of communication, caching, control, and computing resources in cloud-based Internet of Vehicles (IoV) infrastructures. In this context, the book's major subjects cover the analysis and the development of AI-powered mechanisms in future IoV applications and architectures. It addresses the major new technological developments in the field and reflects current research trends and industry needs. It comprises a good balance between theoretical and practical issues, covering case studies, experience and evaluation reports, and best practices in utilizing AI applications in IoV networks. It also provides technical/scientific information about various aspects of AI technologies, ranging from basic concepts to research-grade material, including future directions. This book is intended for researchers, practitioners, engineers, and scientists involved in designing and developing protocols and AI applications and services for IoV-related devices.
